

EEE4022S REPORT AND PRESENTATION INFORMATION

A/Prof. Sunetra Chowdhury
Md Shaihan Islam

Current Timeline 2026

Week	Date		Task
1	27 – 31 Jul	30 Jul	Lectures start. Topics Final. Introductory Lecture on 30 July, Menzies 9, 13h00-14h00
2	3 - 7 Aug		Students to prepare ethics forms.
3	10 - 14 Aug	13 Aug	Ethics forms due – 13 Aug, 23h59
4-6	17 Aug - 4 Sep		Students to maintain GA forms
VAC	7 - 11 Sep	Mid-semester break	
7	14 - 18 Sep	17 Sep	Students to maintain GA forms. Lecture 2 on 17 Sep, Menzies 9, 13h00-14h00
8	21 - 25 Sep	25 Sep	GA Tracking Forms due - 25 Sep, 23h59PM
9	28 Sep - 2 Oct	2 Oct	DP list published
10	5 - 9 Oct	6 Oct	Pre-submission of project report opens, remains open till 26 Oct.
11-12	12 - 23 Oct		
13	26 - 30 Oct	27 Oct	Final Project Report submission on Amathuba - 27 Oct, 23h59PM
14-15	2 - 13 Nov		Marking period
16	16 – 20 Nov	16-19 Nov	Oral and poster presentation – 16 and 17 Nov; Open Day – 18 Nov

ECSA Graduate Attributes

GA	Description	
GA1	Problem-solving	Identify, formulate, research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences with holistic considerations for sustainable development.
GA4	Investigations, experiments, data analysis	Demonstrate competence to conduct investigations of complex engineering problems using research methods, including research-based knowledge, design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions.
GA5	Use of engineering tools	Demonstrate competence to create, select and apply and recognise limitations of appropriate techniques, resources and modern engineering and IT tools, including prediction and modelling, to complex engineering problems.
GA6	Professional & technical communication	Demonstrate competence to communicate effectively and inclusively on complex engineering activities, both orally and in writing, with the engineering community and society at large, taking into account cultural, language, and learning differences.
GA8	Individual work	Demonstrate competence to function effectively as an individual and as a member or leader in diverse and inclusive teams, and in multi-disciplinary, face-to-face, remote and distributed settings.
GA9	Independent learning ability	Demonstrate competence to engage in independent learning through well-developed learning skills.
GA10	Engineering Professionalism (partial)	Demonstrate critical awareness of the need to act professionally and ethically and to exercise judgment and take responsibility within own limits of competence

DP Rules

- Meetings with supervisor to discuss progress towards satisfying the Graduate Attributes – completion of the GA tracking form, signed off by supervisor.
- Oral & poster presentation of results
- Open day exhibition of project

Priorities over the next few weeks

- Work every day
- Always back up working copies of your work, (cloud, external hard drive & Email)
- AVOID PLAGIARISM: a disciplinary and legal offense: mark of zero and disciplinary action **see the Course Handout for the Plagiarism Declaration to be included**

Use of similarity software (turn-it-in)

- Purpose of the software: looks for similarities
- Reference the work that you draw on carefully: citations when you indicate the work you draw on; where you quote directly, use “...” and give the page number
- Danger of the software – it cannot detect well if pictures are copied and pasted, but this is also plagiarism.
- How we will encourage you to use it this semester: 2 assignment tabs
 - *Pre-submission drafts: multiple submissions*
 - ***FINAL submission – SINGLE submission***

The Project Report is what is examined!

■ Project length and structure:

- *Single column format, Times New Roman font, font size 11*
- *max 50 content pages, i.e. excluding Table of Contents, Appendix, References. Severe penalties for overly long reports, including outright failure*
- *Stipulate number of words of the body of your report under your Plagiarism declaration*
- *Be sure that your project title and descriptions reflect the work you have done*
- *GA Appendix: As part of your project report, include an appendix that describes how you met the six Graduate Attributes for your particular project.*
- *Ethics approval letter – Attach the ethics approval letter as a separate appendix.*

Submission and Late Penalties

- No extension on deadline
- Leave enough time to do it properly – aim for the pre-submission date
- Do not wait till one week before submission
- **DO NOT HAND IN LATE! See course handout for penalties**

Due date: Presubmission of the project report opens on 6 October 2026 and closes on 26 October 2026. This presubmission will NOT be marked unless there is a problem with the final submission. This is a fall-back submission, but it is also an opportunity for you to work towards a decent presubmission, leaving time to edit and revise for final submission. Final submission of the report that will be marked is Tuesday 27 October 2026 by 11:59PM.

Late penalties: Please note that, due to the process of external examination of projects and UCT's marks deadlines, there cannot be any extension on this date – you must meet the stipulated deadline. **Late submission will result in stiff penalties:** a 5% penalty will be applied for 1 day late (or part thereof). 15% will be subtracted for 2 days late (or part thereof), down to a mark of 50%. No projects will be marked that are more than two days late.

Assessment

- *Project Report: 90%, Oral and poster presentation 10%*
- *Examined by supervisor, another staff member & External moderator.*
- *6 GAs: Problem-solving, Investigations, experimentation, data analysis, Use of engineering tools, Professional communication, Individual work, independent learning + demonstrating ability to consider ethical implications. (most commonly failed)*

- **Assessment**

90% Project report, 10% Poster and Oral presentation (t.b.c.)

GA tracking forms – DP requirement: These forms are meant to track and assess your progress towards meeting the 6 Graduate Attributes associated with the course. The forms need to be signed off by your supervisor to grant you DP for the course. **Please note: supervisor sign-off on the GA tracking form is NOT a guarantee that you have passed the GAs – GAs can only be marked as Pass/Fail in the project report.** Supervisor sign-off is simply an indication that your supervisor gives around a month before submission that you appears to be on track to hand in a report by the end of the course. Due date: 25 September 2026.

Note: Assessment process is currently being revised. We will update the class as soon as this is completed. But the dates of oral presentations and Open Day will remain the same as mentioned here.

- *The report must contain:*
 - Cover Page (Title, Author, Supervisor, Purpose & Date)
 - Abstract, ToC, Declaration (see the new standard), word count of the body of the report.
 - Introduction
 - Literature review
 - Methodology &/ Design
 - Results & Analysis
 - Conclusions & Recommendations
 - Bibliography/References (IEEE style)
 - Appendices, Simulation and Extra Results.
 - GA Appendix (please see course handout)

What is Plagiarism?

Plagiarism is presenting the work of others (including AI tools) as your own, without giving proper credit (in the form of a citation), and this will result in sanction.

Plagiarism Declaration

Plagiarism Declaration

1. I know that plagiarism is wrong. Plagiarism is to use another's work and pretend that it is one's own.
2. I have used the convention for citation and referencing. Each contribution to, and quotation in, this report from the work(s) of other people has been attributed, and has been cited and referenced. Any section taken from an internet source has been referenced to that source.
3. This report is my own work, and is in my own words (except where I have attributed it to others).
4. **I have not paid a third party to complete my work on my behalf. My use of artificial intelligence software has been limited to (specify precisely how you used AI to assist with this assignment).**
5. I have not allowed and will not allow anyone to copy my work with the intention of passing it off as his or her own work.
6. I acknowledge that copying someone else's assignment or essay, or part of it, is wrong, and declare that this is my own work.

Signed Word count: _____

Declaration on the Use of AI

- We want you to include, in one of the Appendices, example(s) of what prompts were used, what you submitted to the AI to write/improve, and what you received and used.
- This need not be an elaborate reflection, but just a few sentences to indicate how AI was used in the report.
- We want to encourage you to think about how you may have used the tool(s).

Evidence of Work

- Design/Simulation Evidence
- Well explained results and their sources
- Authentic analysis
- Appendices

[illegible]

Marking rubrics on Amathuba

FINAL YEAR PROJECT POSTERS

Health warning!

- These slides are NOT an exemplar of what your slides should look like
- They are meant to serve as a set of notes for you to check (and for those who missed the meeting to catch up)
- They have FAR too much text on them – do as I say, not as I did here!

What is the task?

- Design a poster that will serve to summarize the essence of your Final Year Project
- Essential information:. Size A1 Portrait. Printed free if you do it at Colour & Copy in Rondebosch

How?

- There are free poster templates on Google (search for A1 size, portrait) You can use PowerPoint to design OR use some software such as diagram.net
- Take a look at the **Scientific Poster Design** document from Cornell University with mostly helpful guidelines in Vula Resources >> Posters (**BUT don't follow their advice to start with conclusions**)
- Look at some examples: We will upload some good examples on Amathuba and more examples (good and poor) posters in the **Scientific Poster Design** document

Some advice...

- This is a form of professional communication, so be professional
- It is a limited space, so use it judiciously – you cannot put your entire report on the poster.
- Remember: Less is better!
- What are the most significant aspects of the project?
 - *Background, motivation – very brief (this is not the most significant aspect!)*
 - *Approach, results, interpretation, conclusions: very important!*

Some advice...

- What else?

- *Your name, your supervisor, your affiliation (University of Cape Town) – this does not have to be done in huge font, but it must be legible*
- *Maybe provide QR code to Github repository?*

Be careful:

- **Structure:** plan the layout – the reader should not be left to guess the order in which they should read the poster. Use numbering if necessary (see PDF guideline)
- **Font size:** On A1 size poster, typically:
 - *Title 70 pt*
 - *Headings 56 pt*
 - *Body Text: 32 pt*

Be careful:

- **Pictures, tables, graphs:** These are powerful ways to communicate information visually and it adds interest, but if you use them, use a decent size
- **Use of colour:** Strong contrasts are better, beware of crazy colour combinations and illegible combinations (red text on black or green background as an example). It's all about readability.
- **Background:** Not too busy – keep it simple.

FINAL YEAR PROJECT PRESENTATIONS

Oral Presentation and Open Day Information

- Oral and poster presentation will take place over two days, **16 and 17 November 2026**.
- The department will support students with the printing of the posters at a local printing shop; more information will be made available closer to the time.
- Open Day will take place on **18 November 2026**. Open Day activities include class picture, open day demos, and open day presentation and prizegiving.

What is the task?

- Prepare a short technical presentation of your Final Year Project
- Essential information:
 - *Presentation should be no longer than 10 minutes:*
 - *Questions & Answers: 5 min*
 - *But with the new assessment modality these times may change. We will update you as soon as we have the information.*
- 10 relatively easy marks!

Oral presentation

- Be there 10 mins before presentation slot.
- Bring Presentation on Flash Drive (No google slides)
- Time yourself, practice
- Question time:
 - *Listen carefully, answer the question*
 - *Relax: you are the expert!*

Some advice...

- This is a form of professional communication, so be professional in your use of language, choice of slides, dress smartly etc.
- Take a look at the rubric to see what will be evaluated
- Present the most significant aspects of the project
 - *Background, motivation – very brief (this is not the most significant aspect!)*
 - *Approach, results, interpretation, conclusions: very important!*

Slides: similar to your poster guidelines

- Do not put too much text on a slide:
- Pictures, tables, graphs – these are powerful ways to communicate information visually and it adds interest, but if you use them, use a decent size
- Use of colour: strong contrasts are better, but beware of crazy colour combinations and illegible combinations (red text on black or green background is almost impossible to read). It's all about readability.

Slides: similar to your poster guidelines

- Background: not too busy – keep it simple.
- Go slow on animations, unless to make a specific point, or illustrate your work (ordinary bullet points that fly in are distracting and even boring).

Remember...

- “most people can read silently to themselves 5 to 10 times faster that you can read to them out loud. Your job as a presenter is to read *in between* the lines and provide them with structure. Your slides should be treated as your outline – they are structure, scaffolding, nothing more. If you jam your slides full of details and dozens of bullets, you might as well take your content and write an article. **It's difficult to listen to someone talk and read their slides at the same time** – remember that when you design your content. **YOU are the content, and your slides are your Table of Contents**”.
